

“Green Technology” Street Lights

The Town of Arnprior is conducting a “test pilot” of “**green technology**” street lights along Elgin Street West (west of Hugh Street North). One Light Emitting Diode (LED) and three Induction street lights have been installed and are being monitored to ensure safety and energy efficiency! These green technology street lights live longer, stay brighter and use less energy making them a great option for the future street lights of Arnprior!

CHECK IT OUT!
